Google AI Residency Program

Google AI Residency Program

The Google AI Residency -- previously known as the Google Brain Residency -- is a 12-month research training role designed to jumpstart your career in machine learning research. Residents will have the opportunity to work alongside distinguished scientists and engineers across various machine learning and deep learning research teams within Google.

Who should apply?

The ideal candidate should have a degree or equivalent practical experience in a STEM field such as Computer Science, Mathematics, or Statistics. Candidates should also present evidence of proficiency in programming (preferably in Python or C++) and in the prerequisite courses.

Most importantly, we are looking for people who are motivated and want to learn to conduct machine learning research in collaboration with our researchers. You may have research experience in another field (e.g. mathematics, physics, bioinformatics, etc.) and want to apply machine learning to this area, or you may have limited research experience but a strong desire to do more.

For more information about our program, current residents and examples of resident work, check out **g.co/airesidency**.

I'm interested! Can I apply now?

Yes, the application is now open. Visit **g.co/airesidency/apply** to submit an application!
Application closes January 8th, 2018.
